

# Existing Equipment Services

## Control Solutions for Drives

Allied Controls has extensive experience commissioning and servicing new and existing drives. Specifying, designing, configuring, communicating to and troubleshooting drives is what we do, whether they are stand-alone or networked. Even with today's easily configurable drives, it takes a knowledgeable person to properly setup the drive for optimal performance and reduced power consumption. This is what we can do for you.

## Automation Systems

Our experience with a host of platforms that provide architecture for discrete, motion, and process control systems is second to no one. Whether you need a high performance integrated system or a value-based control system, we can develop a solution to fit within your budget. We offer pre-packaged control system kits. These kits include the engineering and drawing packages complete for you to build from. A program designed to your specifications is pre-programmed and loaded into the controller and/or operator interface we provide. These are Plug and Play solutions for some customer applications who have limited design resources but can handle fabrication, startup, and installation in-house.

## Control Solutions for Sensors

Allied Controls has vast experience using Vision, Photoelectric, Encoders, Network Based, Inductive, Capacitive, and Ultrasonic Proximity sensors in a wide range of applications. Whether you have a new project or are trying to upgrade an existing machine or line, we can help!

Please give us a call on your next or existing project.
